

Lon overlooks progress over the mobile app

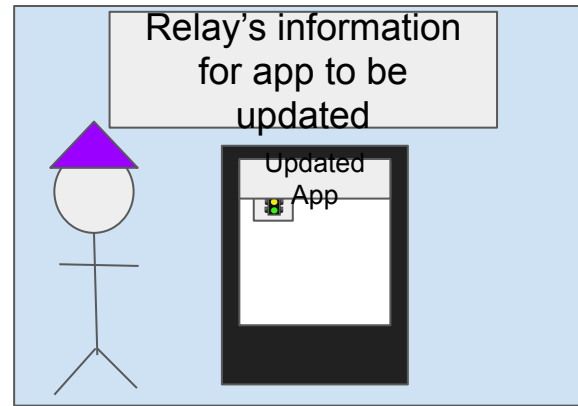

He notices that there is a complaint over one of the traffic lights

He sends a request over to one of the head users to check on traffic light

He receives feedback from head user

Gives feedback to admins to fix the issue.

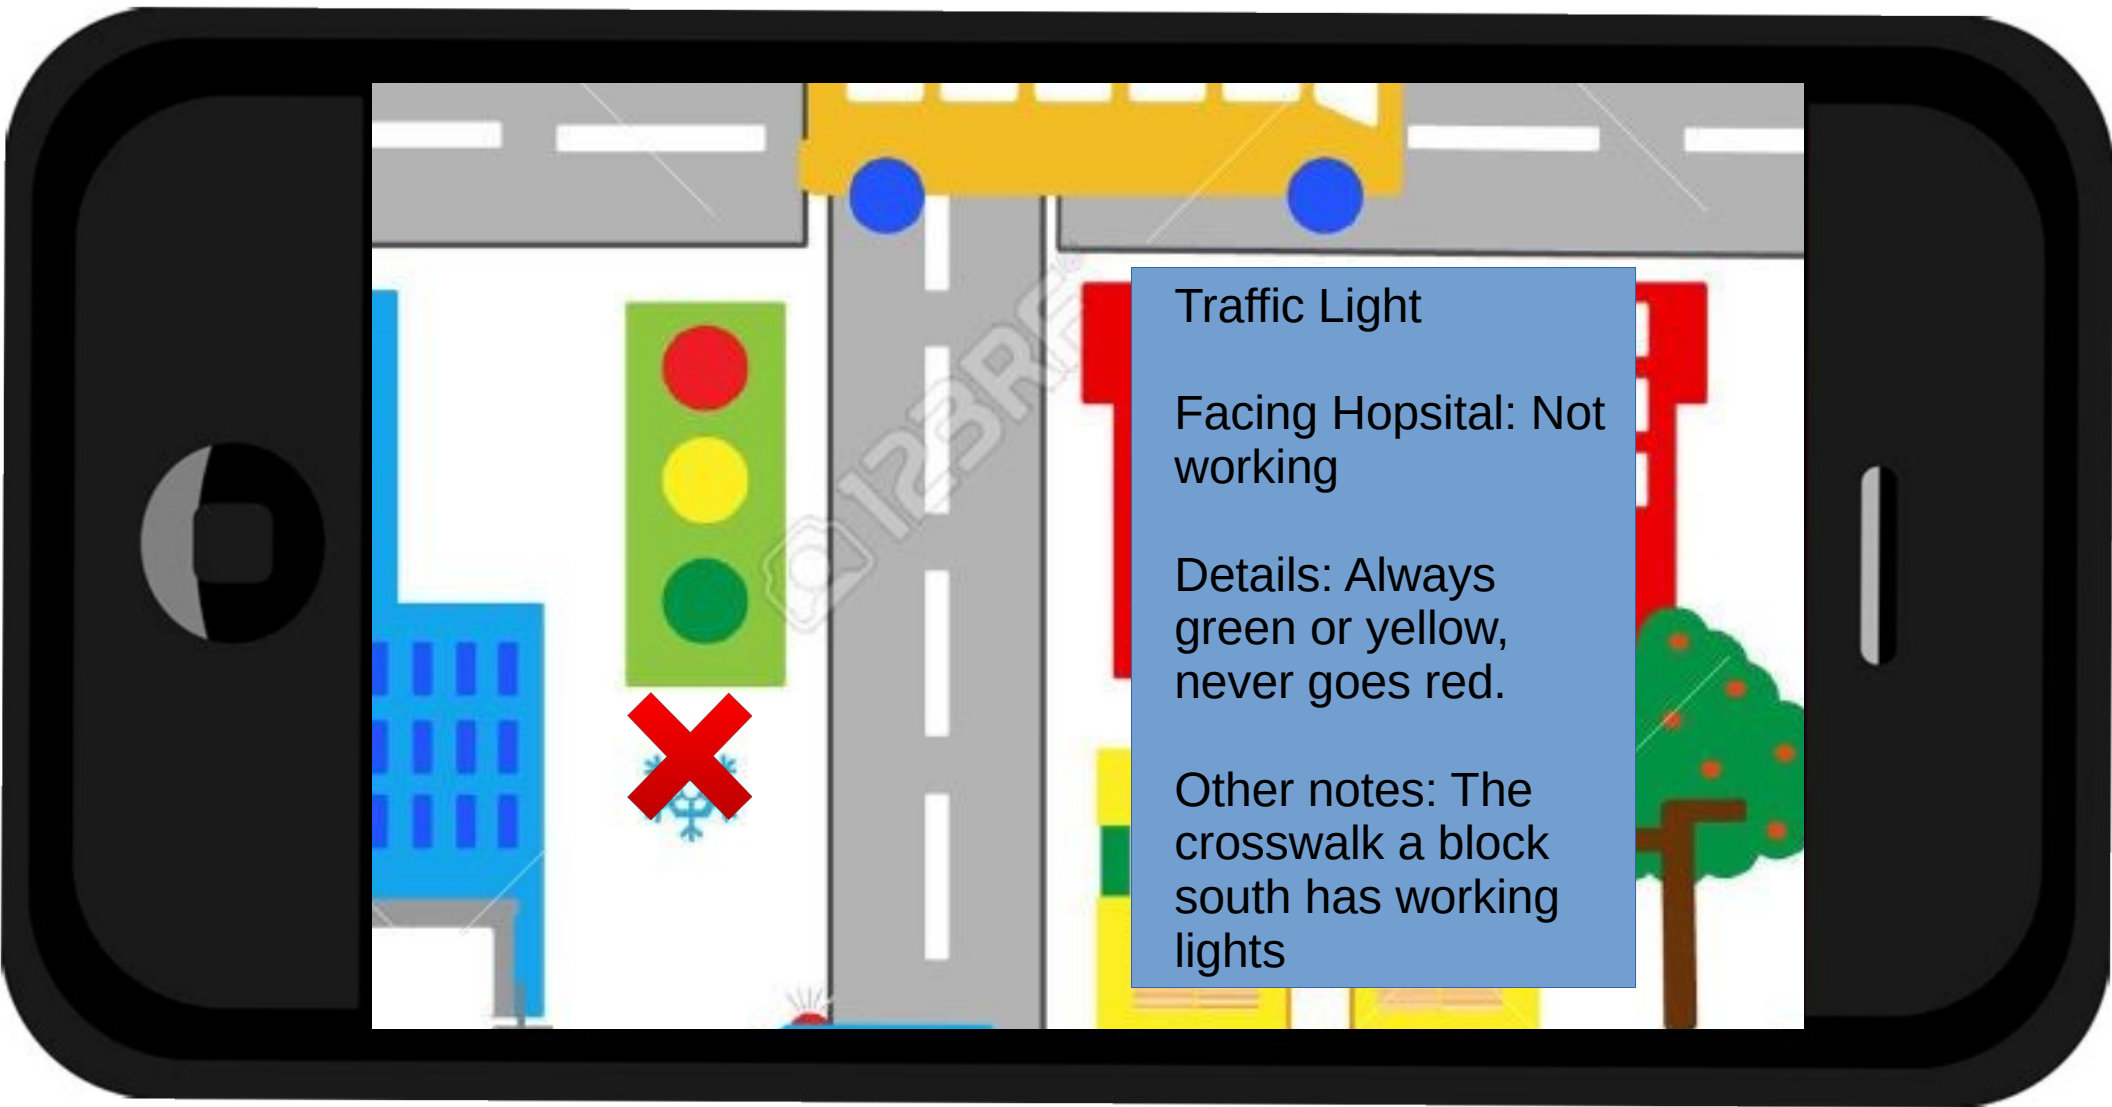

John wants to get to his class on time, but the traffic light seems to be taking forever to change...is it broken?

John opens the app on his phone and searches for his location

The app shows him about the traffic lights near his current location and whether they are fully working or have documented issues

After selecting a traffic light, the app tells John specific details about the light and occasionally gives alternate route suggestions

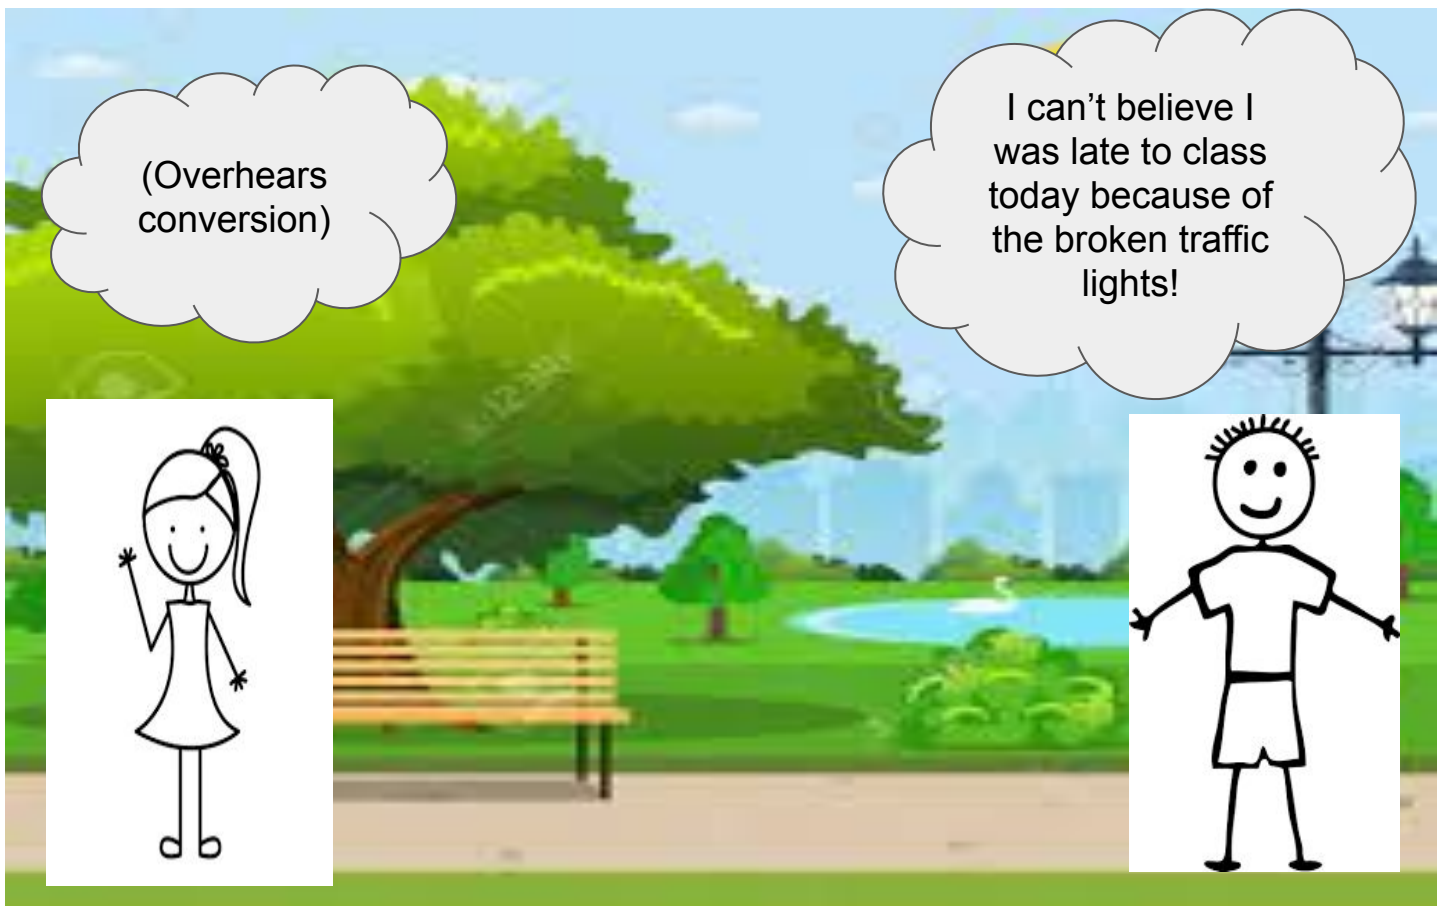

Using an alternate route, John is able to get across the street quickly and safely.

John gets to class serveral minutes early!

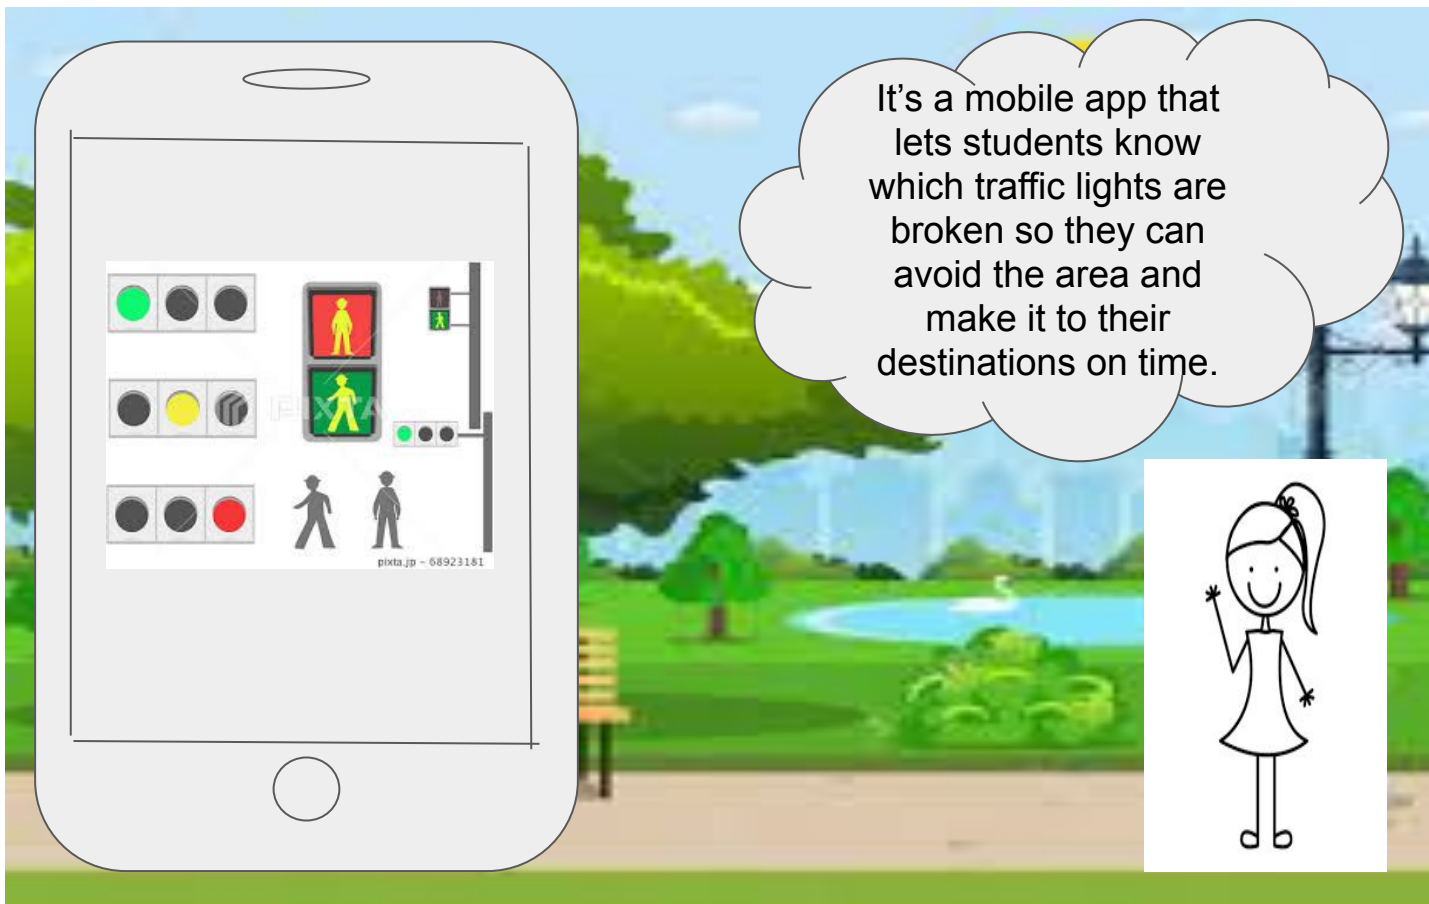

Lisa overhears a student expressing his difficulties with traffic lights.

She tells him that she works for a company that just developed an app to help with his particular issue.

Lisa tells him about the app and how it can be useful for students like him.

Lisa explains to the student how the app can be installed.

The student leaves happy now knowing that he has an app that can help him navigate broken traffic lights.
